

bright future – shining stars

What kind of marks did you get in Maths A, when you were in our year?

Miranda Forwood

Well it wasn't actually Maths A 'cause I went to school in New South Wales, so we had a subject that was actually below Maths A as well, so I didn't do that one. I can't remember, it was alright. I think I got like 80% or something.

So now you design complicated algorithms?

Miranda Forwood

Yeah, yeah, no I, in my final year of uni, we were doing, when I was first learning 3D programming, there's some really complicated maths in that, and I was quite surprised that I actually got it and I fully understood it. I think it's just sort of, the way they taught it at university or something was different as well 'cause I did have to do maths to get into IT eventually but I did it at uni and it was quite different. I think James asked that before, it was, yeah, it was quite different going back to doing maths but it's, yeah, it's fine. I mean I was in classes with people that had done some Maths C stuff as well but if you can get your head around it, you concentrate on it, it's fine, and for me, it was represented visually so I could see the effect. It wasn't just like, oh, why is that crazy algorithm doing that? I don't understand, but I could actually see the results, like if you input this, this is what outputs and it made a lot more sense.
